

## QReg and LM Estimates (Plovers)

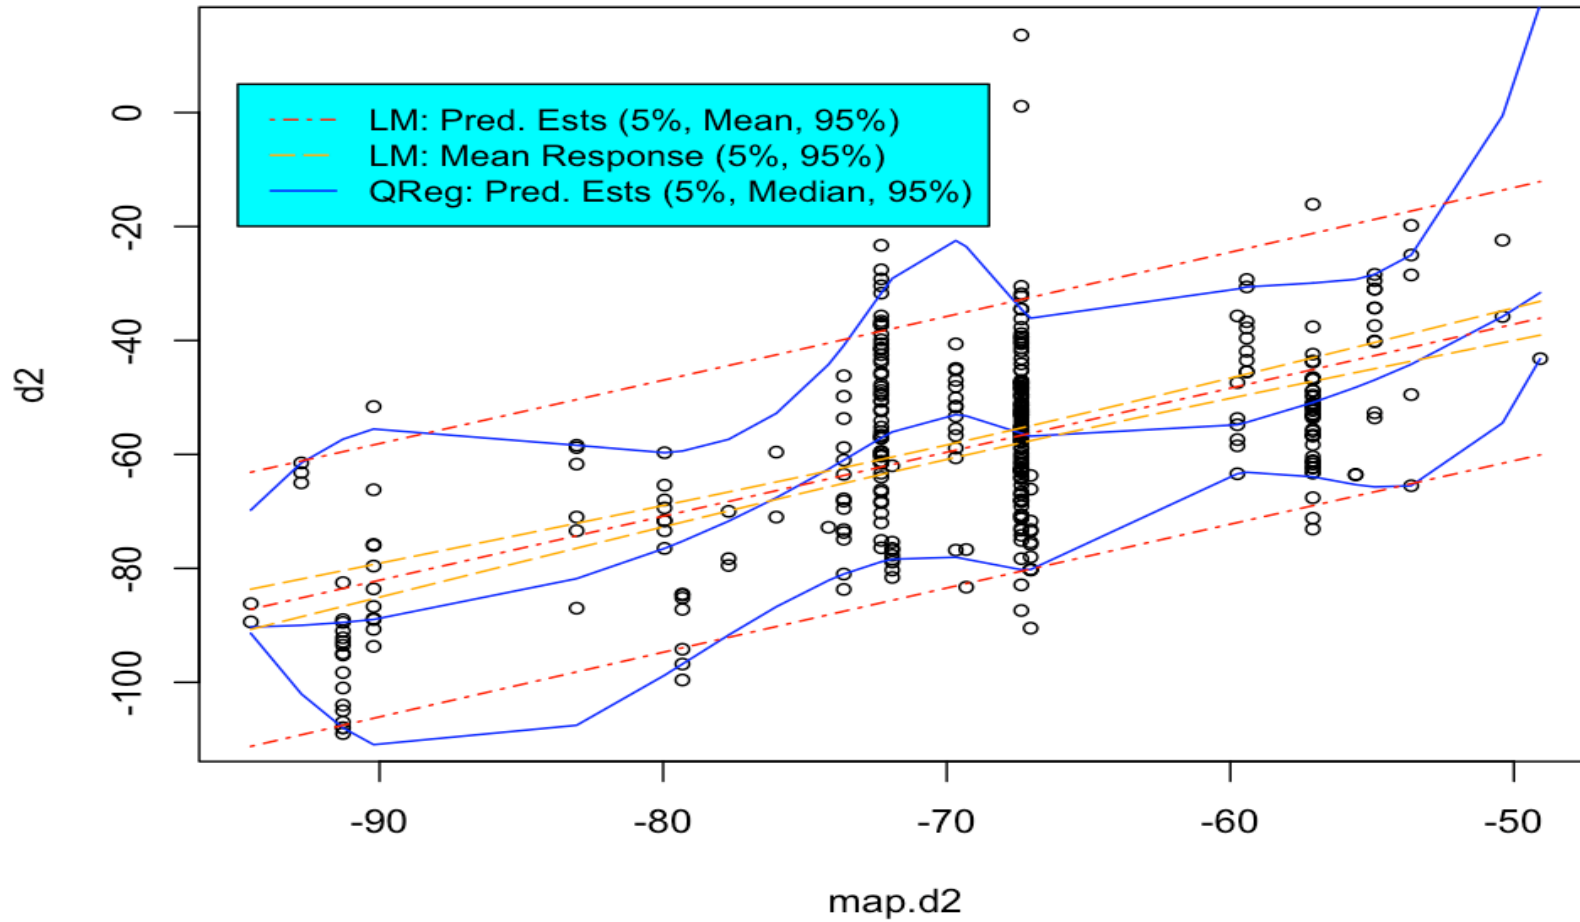

Figure 1: 90% two-sided prediction intervals for feather  $\delta^2\text{H}$  are shown for two different model fits. Additionally, estimates for the mean and median feather  $\delta^2\text{H}$  are shown along with a 90% two-sided confidence limit on the mean feather  $\delta^2\text{H}$ . CHECK PRED ESTS FOR LM (TOO STRAIGHT?)
